

# **Information Security Manager**

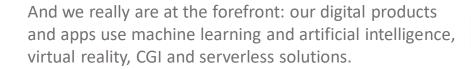

Under the spotlight

Now we're expanding our digital team so we can make an even greater impact – and we need your skills to keep us at the forefront of technology.

Our digital-first vision is underpinned by a clear strategy which allows our staff to develop and grow.

There's never been a better time to join DVSA Digital.

# Information Security Manager

Information Security Managers (ISM) are part of the Information, Management Security and Data Team. The ISM role is integral to the delivery of service for both business as usual and and IT projects through the agile process. All DVSA's IT systems are appropriately assessed to provide security assurance/accreditations to maintain.

DVSA is innovative in considering new ways of working, streamlining processes and introducing new devices and software to enable staff to work more efficiently and effectively. As an ISM, you will make a positive difference by building good working relations to promote best practice. This helps ensure the delivery of DVSA's governance with a variety of internal and external stakeholders, vendors, third party support and other government security agencies.

Our security professionals are passionate about the key role that they play within the agency and the people that they work with and protect. Teamwork and knowledge sharing is an essential part of the Security Centre Operation team's motivation, along with an active research and professional development programme which is at the forefront of our goal of delivering a successful and driven security team.

Our team has a strong working knowledge of security practices and its members understand what it takes to bring a diverse mix of skills together to create a team that can both inspire and grow within the DVSA.

You'll play a large part in helping to deliver a secure IT environment to our colleagues and our customers, and ultimately, contribute to DVSA's commitment to help keep Britain's roads safe.
